

Working Prototype Known Problems Report

Product Name: iTradeU

Team Name: iTradeU Minions

Date: 11/22/16

List of functions not working correctly:

1. Regarding Angular functions:

```
app.controller("profile", function($http) {  
    $http.get('/profile'); });
```

This function calls profile to update the user profile. The function does the http call but it is not able to render the information because we have not passed the user information so that we can display it.

2.

```
<md-content flex id="content">  
    <md-list class="md-2-line">  
        <md-list-item style="border:3px solid gray" ng-repeat="it in ul.selected" >  
            <md-icon style="padding=10px" md-svg-icon="public/assets/svg/package.svg"  
class="md-avatar-icon"></md-icon>  
            <h2 style="padding=15px">{{it.title}}</h2>  
            <p style="padding:10px">{{it.description}}</p>  
  
            <md-button class="share" md-no-ink ng-click="ul.makeContact(ul.selected)"  
aria-label="Share with {{ ul.selected.name }}">  
                <md-icon md-svg-icon="share"></md-icon>  
            </md-button>  
        </md-list-item>  
    </md-list>  
  
</md-content>
```

This should iterate through the matches which we are getting from the server, but instead it displays the users items.

3. The Facebook user log in (Facebook passport authentication) is currently not working.

4. The logout in UserController.js is not working

Function is:

```
function logout(){  
    $http.get('/logout').success(  
        function(data) {
```

```
        console.log("User logged out.")  
    );  
}
```

5. Contact buttons don't work
