## Sprint 1 Report

**Actions to stop doing**:
There are no actions we think we need to stop doing. So far everything is going very well and everyone is satisfied with our progress.

**Actions to start doing**:
Juan believes we should start having code-a-thons, as in meeting on the weekends for a long duration of time and just coding as much as we can, instead of doing little by little daily. We will start merging all our code together into the master branch. We will create unit tests for our matching algorithm, maybe using mocha.js.

**Actions to keep doing**:
Continue meeting 2-3 times a week and staying up to date via group chats on a daily basis.
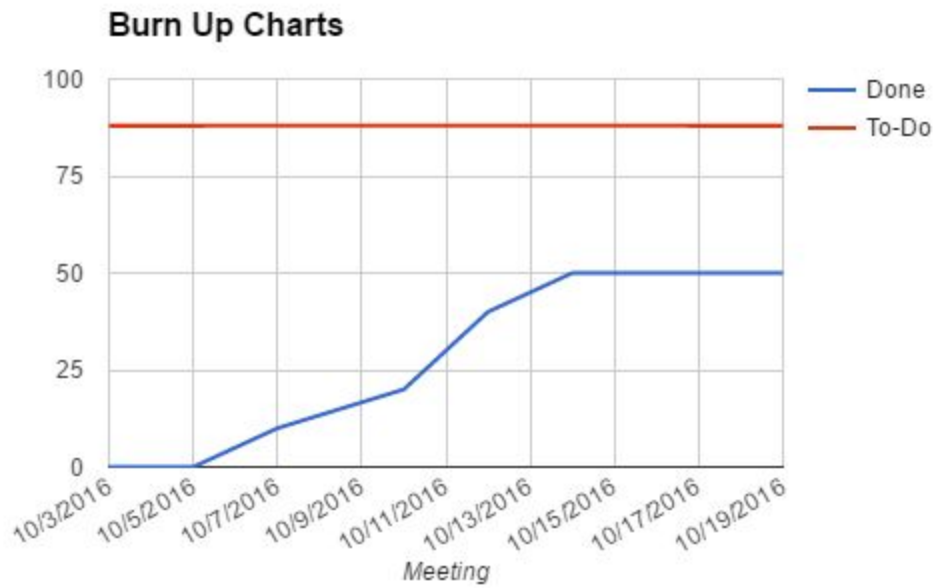

**Work completed**:
User Interface Prototype
Database Schemas
Basic Routing

**Not completed:**
Mobile app interface
Facebook & google sign in/log in
